^c For other states with $E_x < 9.6$ MeV see footnote ^e in [Table 18.17](#) of (1978AJ03) and [Table 18.27](#) here. For other states with $10.0 < E_x < 19.6$ MeV see [Table 18.27](#) here, and [Tables 18.14](#) and [18.16](#) in (1978AJ03). These two tables in (1978AJ03) display the states deduced from the yields of the isospin-forbidden α_1 groups in $^{14}\text{N} + \alpha$ and $^{16}\text{O} + \text{d}$, respectively. (1976CH24) reports 151 isospin-mixed natural-parity states with $10.4 < E_x < 17.5$ MeV [$^{14}\text{N}(\alpha, \alpha_1)$] and (1973JO13) reports 138 such states with $9.2 < E_x < 19.4$ MeV [$^{16}\text{O}(\text{d}, \alpha_1)$] of which 16 have $E_x > 17.5$ MeV. In the region $10.4 < E_x < 20.8$ MeV some 167 states with mixed isospin and natural parity have been reported. See also [reaction 29](#).
